# Deep Learning

# Deep learning

Representation learning with a hierarchy of concepts

Those concepts are represented by layers in a neural network model

#### **Unsupervised models**

Autoencoders

# Types of Deep Learning Tools

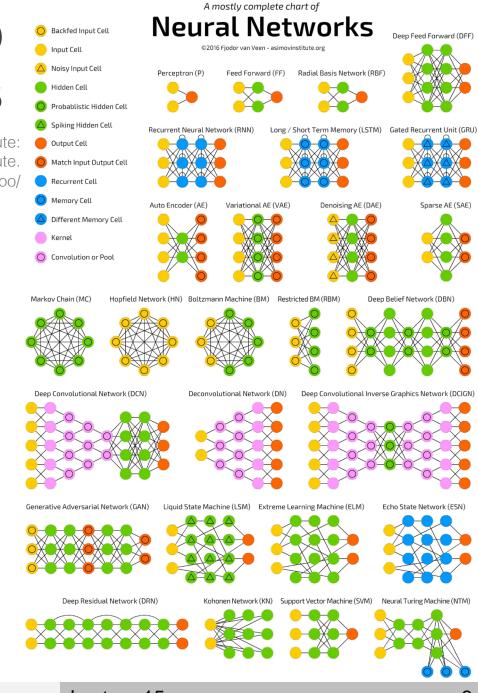

Azimov Institute: http://www.asimovinstitute.org/neural-network-zoo/

#### Supervised models

- Image analysis:
  - Convolutional Neural Networks
- Timeseries analysis (often NLP):
  - Recurrent Neural Networks (e.g. LSTMs)
  - Transformer models

#### **Generative models**

- Generative Adversarial Networks (GANs)
- Diffusion Models (e.g. DALL-E 2, Stable Diffusion)
- Generative Pre-trained Transformer (GPT)

#### Autoencoders

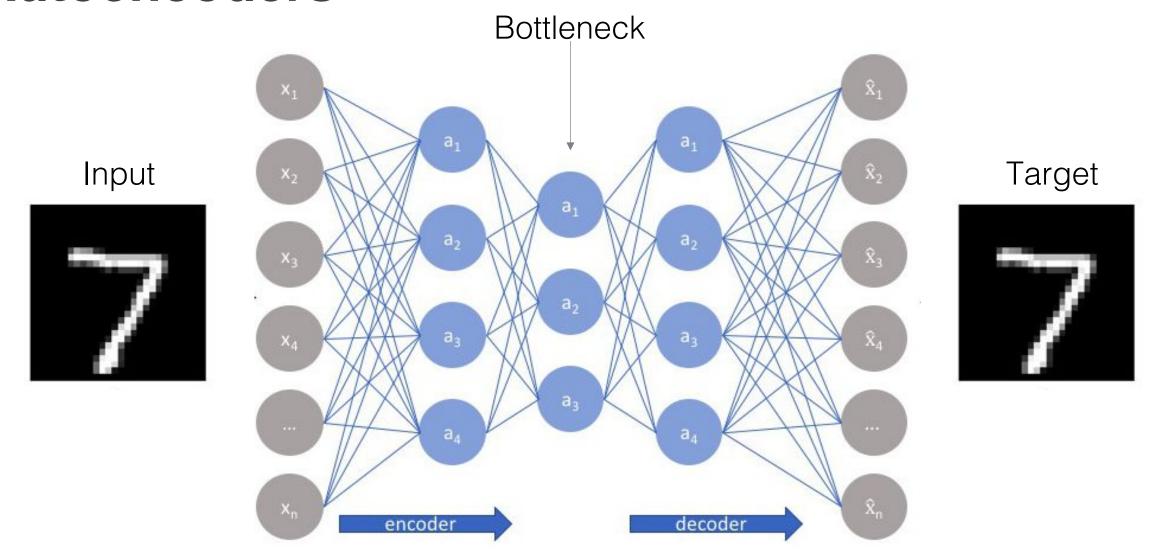

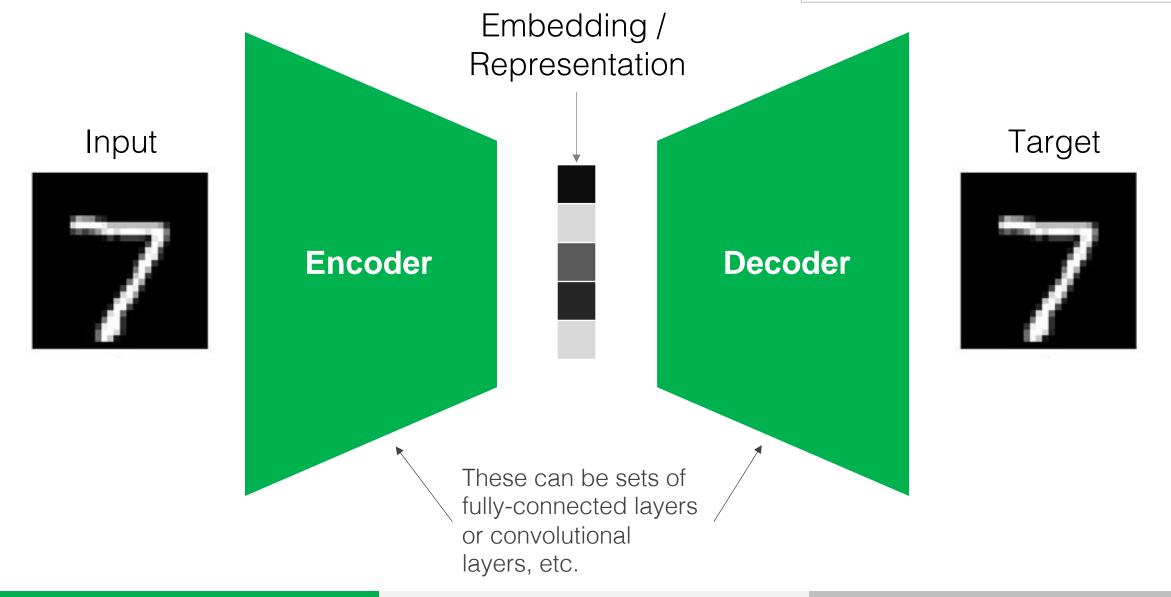

Image from: https://www.jeremyjordan.me/autoencoders/

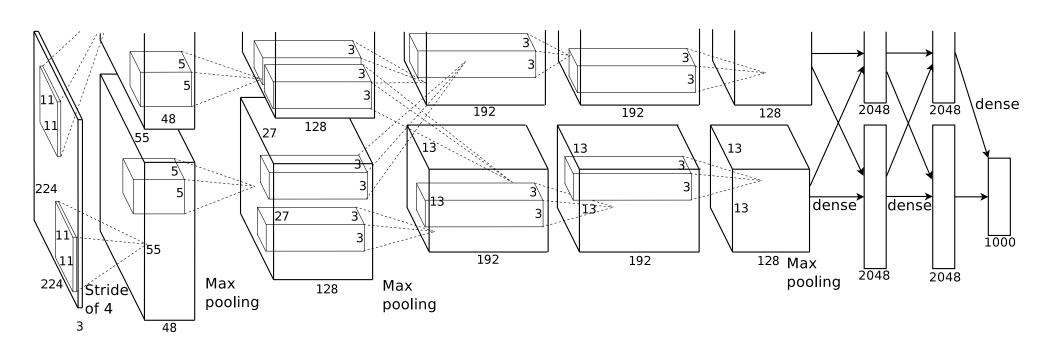

#### Autoencoders

Our goal is often to develop a good **encoder** that represents our features well

# What features do layers respond to?

Olah et al, 2017: https://distill.pub/2017/feature-visualization/

#### **Features**

Dataset Examples show us what neurons respond to in practice

Optimization isolates the causes of behavior from mere correlations. A neuron may not be detecting what you initially thought.

Baseball—or stripes? Animal faces—or snouts? mixed4a, Unit 6 mixed4a, Unit 240

Clouds—or fluffiness? mixed4a, Unit 453

Buildings—or sky? mixed4a, Unit 492

Olah et al, 2017: https://distill.pub/2017/feature-visualization/

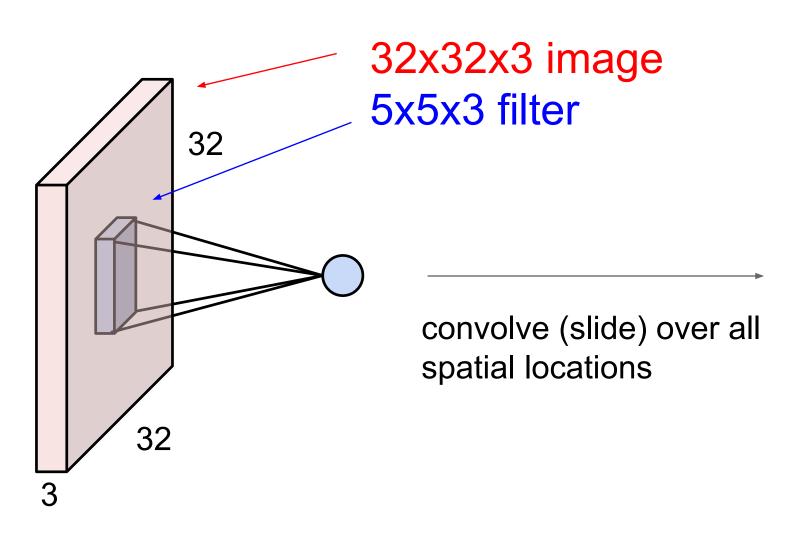

## Resources on Visualization of Features

Building blocks of interpretability: <a href="https://distill.pub/2018/building-blocks/">https://distill.pub/2018/building-blocks/</a>

Activation Activation Atlases: <a href="https://distill.pub/2019/activation-atlas/">https://distill.pub/2019/activation-atlas/</a>

# **Convolution Layer**

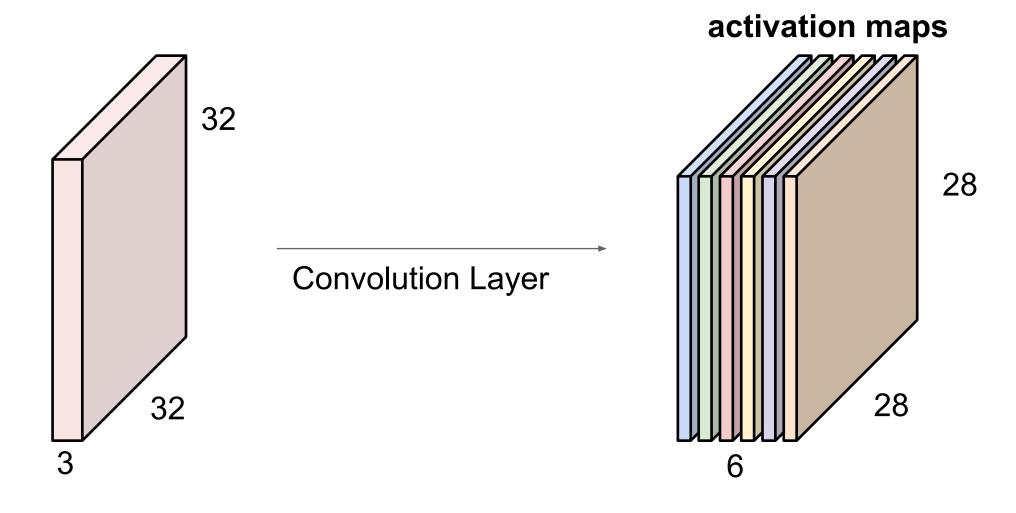

#### activation map

From Fei-Fei Li, Justin Johnson, and Serena Young. CS231n, 2018

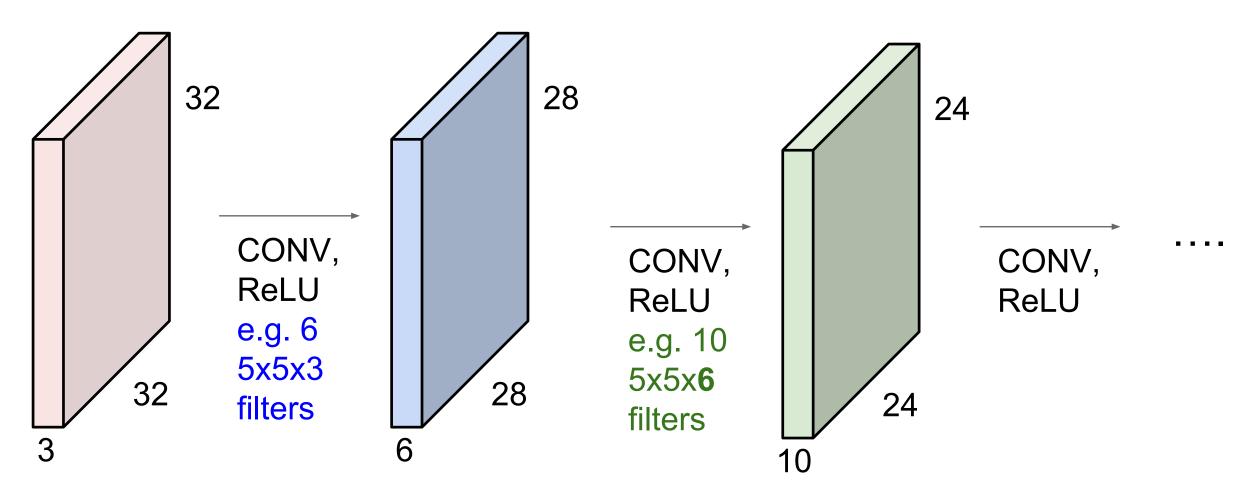

For example, if we had 6 5x5 filters, we'll get 6 separate activation maps:

We stack these up to get a "new image" of size 28x28x6!

From Fei-Fei Li, Justin Johnson, and Serena Young. CS231n, 2018

**Preview:** ConvNet is a sequence of Convolution Layers, interspersed with activation functions

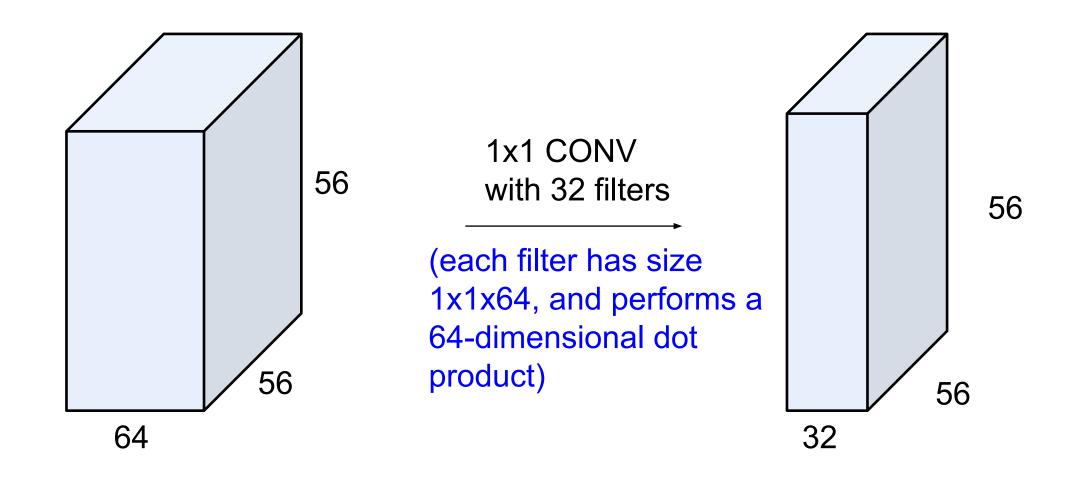

Parameters = (5\*5\*3)\*6 = 450

(5\*5\*6)\*10 = 1,500

From Fei-Fei Li, Justin Johnson, and Serena Young. CS231n, 2018

# ImageNet Large Scale Visual Recognition Challenge (ILSVRC)

Fei-Fei Li et al. 2010 (link)

Competition at:

Conference on Computer Vision and Pattern Recognition (CVPR)

#### **USED FOR MODEL PRETRAINING**

In the competition's first year teams had varying success. Every team got at least 25%

below 25%.

**In 2012,** the team to first use deep learning was the only

team to get their error rate

The following year nearly every team got 25% or fewer wrong.

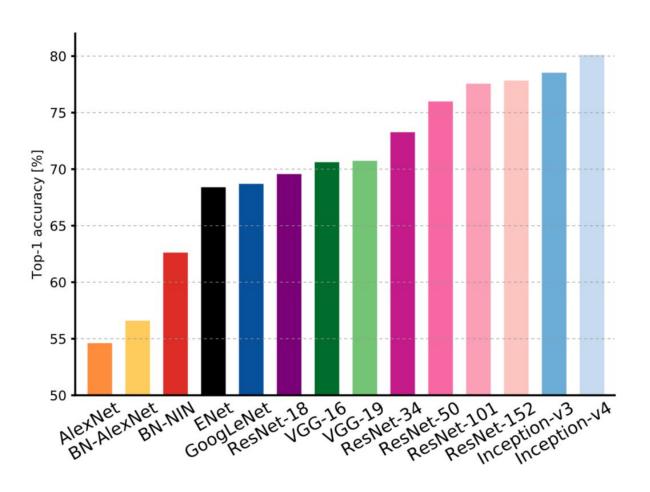

wrong.

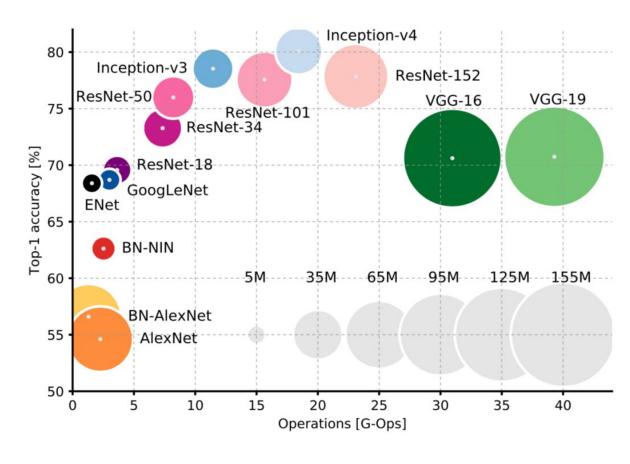

100%

wrong

# Deep Learning Models Compared

Models compared for ImageNet Many of these models are available through Keras (<u>link</u>)

A. Canziani, E. Culurciello and A. Paszke, "Evaluation of neural network architectures for embedded systems," *2017 IEEE International Symposium on Circuits and Systems (ISCAS)*, Baltimore, MD, 2017, pp. 1-4.

# Deep learning frameworks

#### Tensorflow (link)

Framework for implementing graphical models, such as neural networks

#### Keras (<u>link</u>)

Wrapper for Tensorflow to make coding easier: higher level and excellent API

#### PyTorch (link)

Framework for implementing graphical models, such as neural networks

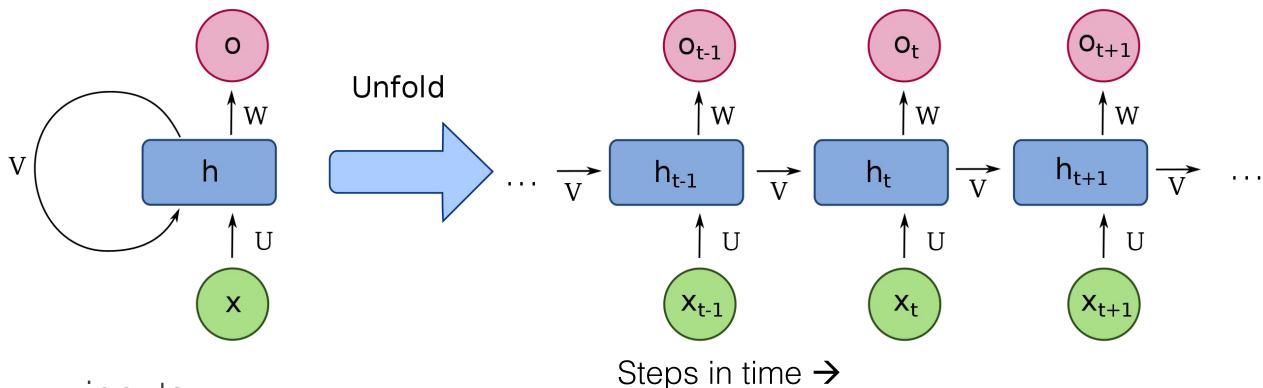

# **KERAS DEMO**

#### **Recurrent Neural Networks**

x = inputs

o = outputs

h = hidden layers

U,V,W = model weights

Image from https://en.wikipedia.org/wiki/Recurrent\_neural\_network

## **Generative Adversarial Networks**

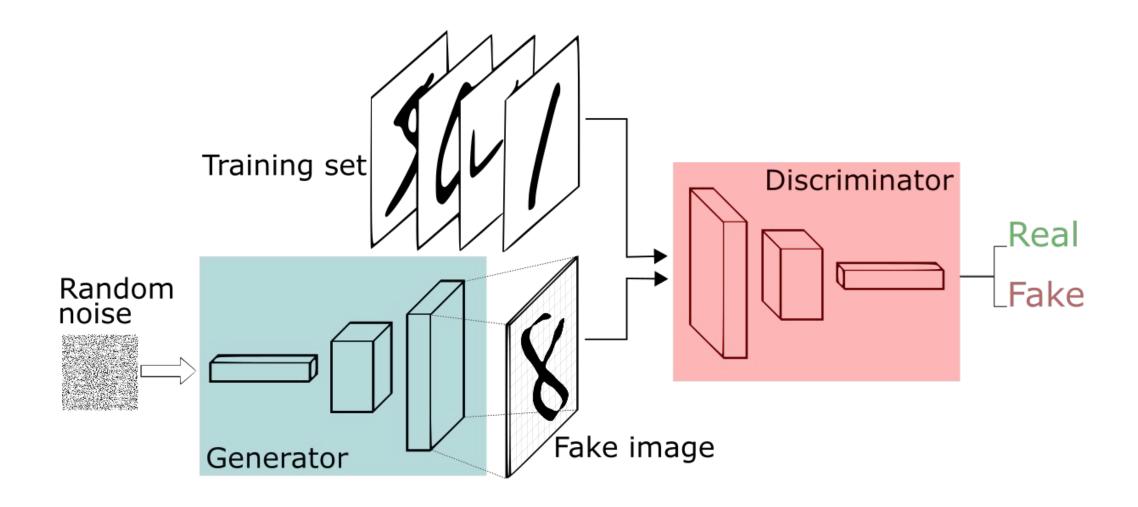

Image from: https://skymind.ai/wiki/generative-adversarial-network-gan

## **Supervised Learning Techniques**

- Linear Regression
- K-Nearest Neighbors
  - Perceptron
  - Logistic Regression
  - Linear Discriminant Analysis
  - Quadratic Discriminant Analysis
  - Naïve Bayes
- Support Vector Machines
- Decision Trees and Random Forests
- Ensemble methods (bagging, boosting, stacking)
- Neural Networks

Appropriate for:

Classification

Regression

Can be used with many machine learning techniques
